

BALANCED NUTRITION IS THE MISSING LINK

WHY IS BALANCED NUTRITION SO IMPORTANT FOR HONEY BEES?

LACK OF FORAGE: 20 years ago, honey bees had access to better forage. Today, human expansion, overuse of herbicides, and increased monocultures have left little remaining for our honey bees.

Regular access to vitamins, minerals, and micronutrients can help bees maintain their optimal health.

PESTICIDE EXPOSURE: Pesticides and herbicides can damage tissue and hurt honey bee gut health. Bees activate their detoxification systems to fight these widespread exogenous components.

Antioxidants are the key factor in controlling ROX and stopping the damage caused by oxidative stress.

POOR NUTRITIONAL PRACTICES: The most prevalent bee foods today are processed sugar and soy. Sugar contains zero micronutrients while soy is an incomplete source of amino acids (i.e. tryptophan, isoleucine, and methionine).

Higher quality ingredients more effectively fill nutritional gaps in bee diets.

HOW HEALTHY BEES™

PROVIDES BALANCED NUTRITION

Healthy Bees, LLC

SPIRULINA A SUPERFOOD

Spirulina, found in Healthy Bees™ patties and powders, is widely regarded as a superfood because of all its beneficial and well-balanced nutritional properties. **Spirulina is one of the best sources of vegetal proteins and contains all the amino acids (18 in total) bees need to metabolize protein efficiently.**

Spirulina is a bacteria (which means its cell walls break down more easily), making its nutrients more bioavailable to honey bees. It is also a clean food source that has a very low risk of contamination.

LACK OF FORAGE: SOLVED

Spirulina, along with the rest of the all-natural ingredients in Healthy Bees™, provides a wide variety of vitamins and minerals that bees need to **fill in the gaps left by a lack of unadulterated forage.**

Vitamins: B1, B2, B3, B5, B6, B9, D2, C, E, K

Minerals: Calcium, Iron, Manganese, Phosphorus, Potassium, Zinc

EXPOSURE TO PESTICIDES: SOLVED

The powerful antioxidants in Healthy Bees™ come from Spirulina and 10 carefully selected essential oils. These antioxidants include phycocyanin, tocopherols, beta carotene, and many more. Antioxidants have shown an ability to limit the negative effects of pesticide and herbicide exposure in honey bees.

Scientific trials conducted by the USDA have shown that **Healthy Bees™ contains 17-38 times more antioxidant power than other bee products found on the market today.**
